

Connections & integration status

Audience: Stakeholders & delivery · Generated 2026-06-23

A board of every external connection the platform uses — what it powers, whether it's working, and what's blocked. Pairs with [DATA_SOURCE_MAP.md](#) (per-page data sources) and [IRESS_ISSUES_FOR_ANDRE.md](#) (the open IRESS items in detail).

Last verified: 2026-06-22.

How to read this

-  **Working** — connected and returning real data (verified).
-  **Partial / unverified** — connected but some feeds blocked, or not verifiable from here.
-  **Not connected** — not wired / credentials absent / deferred.
- **Local vs prod:** the Vercel app reads Supabase + public APIs directly and is verified here. **IRESS is only reached by the Railway worker, which does not run locally** — so all IRESS-fed data is seed/empty on a dev machine and only live in production. IRESS production status below is from the integration code + IRESS's own confirmations (15–16 Jun), not a live-worker check from this environment.

At a glance

Connection	Type	Status	Powers	Verified
Supabase RETAIL (mfxng)	Database	 Working	Securities universe, fundamentals, holdings, strategies, clients/KYC, news wire	Yes — 246 securities, 9 strategies, news
Supabase INSTITUTIONAL (nnwz)	Database	 Working	OEMS book, order audit, curves, bonds, indices, worker health	Yes — quote snapshots, 18 orders
IRESS V4 (CT, DFM@Mint)	Market data / orders	 Partial (prod)	Live quotes, bonds, curves, order mirror	Prod-only (see below)
Railway worker (iress-ingest)	IRESS bridge	 Prod-only	The only process that talks to IRESS → writes Supabase	Not running locally
Yahoo Finance	Market data (fallback)	 Working	Fundamentals (mkt cap/PE/div/YTD) + AI-research financials & news	Yes
Tavily	Web search	 Working	AI-research live web research	Yes — key set, returns results
MiniMax-M3	LLM	 Working	AI-research synthesis	Yes — live calls succeed
SARB	Public API	 Working	Repo/prime/ZARONIA + macro rates	Yes
ECB / Frankfurter	Public API	 Working	FX spot (USD/ZAR etc.)	Yes
RSS (Moneyweb, BusinessTech)	News feed	 Working	News/SENS tape (general wire)	Yes
Supabase Auth	Auth	 Working	Login / sessions	Yes

Connection	Type	Status	Powers	Verified
Anthropic / Claude	LLM (alt)	🚫 Not active	AI-research swap-in for MiniMax	Key not set
Resend	Email	🚫 Not wired	Marketing campaigns + transactional sends	Sends deferred
SumSub	KYC	🚫 Not configured	Client KYC review	"Credentials not configured"

Working (verified)

- **Supabase RETAIL** (`mfxng`) and **INSTITUTIONAL** (`nnwz`) — both connected and serving real data. Retail: 246 securities, 9 strategies, client book, news. Institutional: live quote snapshots, 18 order-audit rows.
 - One gap: the AI-research cache table `ai_research_cache_c` is **not yet created** on `nnwz` → research caching runs in-memory per-instance until the migration is applied.
- **Yahoo, Tavily, MiniMax-M3** — power the AI Research feature; all three verified live (real financials + web sources + model output).
- **SARB, ECB/Frankfurter, RSS** — public feeds for rates, FX and news; all returning data.

⚠️ IRESS — partial (production only)

IRESS is reached **only** by the Railway worker (single CT licence seat); the web app reads what the worker writes into Supabase. Status of each IRESS feed:

Working in production (confirmed with IRESS, 15–16 Jun):

- Equity quotes — `PricingQuoteGet` , `JSE` / `JSED` (10-name watchlist live)
- Bonds + ZAR yield curves — `TimeSeriesGet2` , `YFX` / `YFXD`
- Order mirror (read-only) — `OrderPadGetByAccount` , `IOS+`, account 56378

Blocked / open (see [IRESS_ISSUES_FOR_ANDRE.md](#) for the data + asks):

- JSE index levels — J203 (ALSI), J200 (Top 40), sector indices → resolve but return no data
- FX spot (USD/ZAR) — no usable IRESS code (using ECB instead)
- Money market — JIBAR / ZARONIA / Prime / Repo → no codes / placeholder series
- Fundamentals — no `SecurityGet` method/entitlement (using Yahoo instead)
- Equity price history (1M/6M/YTD returns) — JSE daily history unconfirmed
- L2 depth / time-&-sales — method/entitlement unconfirmed
- News / SENS — no IRESS path (using RSS / needs a vendor)
- CT vs production endpoint + licence-seat handling — to confirm

Operational note: the full-universe retail price + **day-move** (`change_percent`) loop in the worker is built but **dormant** — that's why the heatmap/sector day-moves read flat. Turning it on needs no IRESS entitlement: a migration + two worker env vars + a redeploy.

🚫 Not connected yet

- **Anthropic / Claude** — wired as a swap-in AI provider but no key set; MiniMax-M3 is the active model.
- **Resend (email)** — marketing-campaign + transactional sends are deferred (no live blast).
- **SumSub (KYC)** — client KYC review shows "credentials not configured"; needs SumSub keys.

Environment flags that change behaviour

Flag	Effect	Notes
NEXT_PUBLIC_USE_SUPABASE_QUOTES	UI real-data mode	Now defaults to real-data-only ; mock via <code>?mock=1</code>
USE_SUPABASE_QUOTES	BFF reads Supabase vs seed	Set in production
IRESS_WORKER_URL / RAILWAY_SERVICE_URL	Worker passthrough (live orders, history, health)	If unset → those routes return 503 / honest-empty
IRESS_RETAIL_INGEST=1 + IRESS_RETAIL_DRY_RUN=0	Full-universe IRESS price + day-move	The dormant loop above
TAVILY_API_KEY / tavily_key	AI-research web search	Code reads both casings
MINIMAX_API_KEY	AI-research model	Active

Bottom line

Databases, Yahoo, Tavily, MiniMax, and the public APIs (SARB/ECB/RSS) are **connected and working**. The web app itself has no broken connections. The open work is concentrated in **IRESS** (entitlements/codes from Charles + the technical items for Andre, and standing up the production worker), plus three not-yet-connected services (Claude key, Resend, SumSub) that are deferred by design.
